

Installing Glass Concrete Panels

Included:

Glass Panels

Clips to secure panels

Self-tapping screws (**Installed**)

Install the left and/or right sides first.

With the panel held in position, hold the slotted “L” shaped clip to the ceiling and the other end against the glass. Leave 1/16” space at top to allow for expansion. Use the self-tapping screw to secure the clip to the ceiling. The slot will allow you to adjust the clip.

Arrange the rear panels (as above with one clip supporting two panels.)
