

Most Realistic Electric Fireplace Technology Available: European Home Introduces Electric Modern

MIDDLETON, Mass. – August 7, 2018 - [European Home](#), manufacturer and distributor of innovative and contemporary fireplace products, has debuted their new electric fireplace line, Electric Modern. All Electric Modern electric fireplaces feature industry leading LED-powered flame effects, a highly detailed Woodland Log Set and can be operated with the E-touch App via nearly any smart device.

According to Holly Markham, President of European Home, “For years the technological evolution of fireplaces was stagnant, and for good reason. Nothing can completely replace the feeling of a wood-burning fireplace. However, in recent years, through innovation and advances in technology, we are coming closer than ever.” The Electric Modern line is committed to innovating the highest quality electric fireplaces with the most realistic flame effects on the market.

Why Choose an Electric Modern Fireplace?

- **Flexibility & Safety** – since venting isn’t necessary and heat is optional, you can install an electric fireplace almost anywhere (in any climate) in your home or commercial space.
- **Plug-and-Play** – No running gas lines and no chopping logs, simply use the electricity already running through your space.
- **Ambiance & Style** – Get a beautiful and eco-friendly flame effect, modern trimless lines and your choice of configurations including single sided, corner and 3 sided models.

Whether you have a tiny house, high-rise condo or expansive hotel lobby, there is an Electric Modern fireplace perfect for any space.

About European Home

European Home is the sole distributor of the Electric Modern line. These revolutionary electric fireplaces can be purchased online through the [Electric Modern website](#).
